

is chance; stars are exact binomial tests corrected across strategies. Strategies that make identical predictions in the current design remain statistically indistinguishable from chance. C: the same sequence expressed as target identity T1/T2. Comparing B and C distinguishes between Rich, salience, T1, or the previous choice was on the right. Brackets are two-sided Fisher exact tests. E: descriptive choice proportions within each block; reversals of side. Spatial entropy. One bit indicates balanced right/left choices; values near zero indicate a nearly fixed side.
