

Choice biases and perseveration

Target Type	Conflict (Mean)	Congruent (Mean)
Choose high-salience target	~0.47	~0.41
Choose high-reward target	~0.53	~0.41

Engagement statistics and inte

Operational engagement tests

Completion rate: early=0.888, late=0.746, delta=-0.142,
Median pre-trial interval (s): early=1.148, late=1.150, del
Median reaction time (ms): early=254.7, late=234.0, del
Median fixation acquisition latency (ms): early=217.6, late
Mean missed frames: early=0.022, late=0.097, delta=0.0

Change-point tests (permutation-corrected for split search)

Failures: attempt 502.0, $p < 0.001$
Pre-trial interval: attempt 516.0, $p = 0.008$
Reaction time: attempt 519.0, $p = 0.401$
Fixation latency: attempt 303.0, $p = 1.000$

Final operational interpretation:

increased failure rate ; longer pre-trial intervals ; at least

Stars test each probability against 0.5. B: direct conflict-versus-congruent comparisons; brackets use Fisher exact tests. C: multivariable logistic-regression odds ratios controlling for the other predictors. D: exact numerical summary of engagement tests. Stars throughout this figure use FDR-adjusted q-values, except single pre-specified tests whose values are exported to CSV and analysis_report.txt.
