

both_training | Statistical summary | DEBUG DESCRIPTION: no real eye-controlled choice biases and perseveration

No conflict-congruent comparison

Engagement statistics and interpretation

Operational engagement tests

Completion rate: early=1.000, late=1.000, delta=0.000, p=1.000
Median pre-trial interval (s): early=1.549, late=1.552, delta=0.003, p=0.999
Median reaction time (ms): early=n/a, late=n/a, delta=n/a, p=n/a
Median fixation acquisition latency (ms): early=1.815, late=1.815, delta=0.000, p=1.000
Mean missed frames: early=2.671, late=3.412, delta=0.741, p=0.001

not available or model not estimable

Change-point tests (permutation-corrected for split search):
Failures: attempt 168.0, p=1.000
Pre-trial interval: attempt 635.0, p=0.024
Reaction time: attempt n/a, p=n/a
Fixation latency: attempt 289.0, p=0.329

Final operational interpretation:
Only one indicator changed: longer pre-trial intervals. Even though the pre-trial interval is longer, the reaction time is not significantly different from the baseline.
